

Readme file :

To compile and run the code,

- 1) Move the main.cpp file content into the main.cpp created when we create a new project.
- 2) Open Xcode, select the project
- 3) Go to Product->Scheme->Edit Scheme. Under Arguments, add the path of the bird.jpg file and click close
- 4) Go to Product-> Build . If there are any errors, they will be displayed otherwise the build will be successful.
- 5) Then go to Product-> Run. The project executes and press the Esc key to stop the project.
- 6) We can notice Program ended with exit code:0 in variables view window which implies that the program is executed successfully.
